

## 5) Online shopping system

- 1) It is used by user who can be an admin, a session manager or a customer.
- 2) The admin handles the create, delete, manage product. He can view the catalog details, & update new products & can manage customers.
- 3) The customers can register & login to the system, they can buy product by searching & also update their profile.
- 4) The session manager manages the system for customers like listing products, getting customer details & give order details.
- 5) A shopping cart feature exists which lists all the product a customer wants to buy.
- 6) The various order can be placed in the system by giving relevant order details.
- 7) There exist different department which contains various categories of product & their info.
- 8) Once an order is placed the shipping info of the product must be available for product delivery to customers.

**Problem Statement :** The normal purchasing of groceries & other required items, in stores is time consuming & there is an issue of time, quality, price & availability, to overcome these issues we develop the online system.
