3} Stock Management System

The system will allow the employees to record info of the items available in the store and generate reports based on the total amount of sales. The new system will have a windows-based desktop interface to allow employees to enter the info of sales.

1} The owner has a manager which manages the inventory. The owner can order, sell stock. He can make payments report, quality issue, trace orders
2} The manager maintains a ledger, quality check.
3} & In the inventory we can add, remove and search the inventory. He can calculate the req stock.
4} The order details have to be displayed.
5} The stocks can be edited, removed or added.
6} The supplier tracks orders details & supply the stock & reviews payment.
7} A product, added, modified, details can be viewed.

Problem Statement : The pricing of stocks keeps changing continuously, & the key point is to invest at the perfect time in the proper company. For which its difficult to monitor continuously.
